## ***ABSTRACT***

*In 2005, fixed-income funds in crisis marked by the decline funds under management at year end 2005 compared with the beginning of 2005. Until 2007, fixed-income funds experience a significant increase although Indonesia's economy is still vacillating economic crisis. Specific target of this study to determine the performance of fixed-income funds and macro economics variables that influence it so that it can provide protection to investors. The long-term goal of this research is the creation of markets for fixed-income funds and orderly, fair, and efficient. Research conducted on to 79 active fixed-income funds during the years 2005 to 2007. Data derived from fixed-income funds NAV contained in the Media Business Indonesia, Bank Indonesia, and the BPS Province. Data were analyzed with a statistical regression method to determine the effect of macro economics variables such as world oil prices, gold prices, SBI, Inflation, and exchange rate on fixed-income funds in Indonesia.*
